

SCIENCE

Earth Space Science

___ I can explain that the solar system includes the sun and all celestial bodies that orbit the sun. Each planet in the solar system has unique characteristics.

___ I can identify the sun as one of the many stars that exist in the universe.

___ I can describe how most of the cycles and patterns of motion between the Earth and Sun are predictable.

Physical Science

___ I can explain that the amount of change in movement of an object is based on the mass of the object and the amount of force exerted.

___ I can discuss how light and sound are forms of energy that behave in predictable ways.

Life Science

___ I can describe ways that organisms perform a variety of roles in an ecosystem.

___ I can identify how all processes that take place within organisms require energy.
